THE WALKED SHAYES OF ANTERRICAN

TO ALL TO WHOM: THESE; PRESENTS; SHALL COME;;

Pioneer Hi-Bred International, Inc.

Whereas, there has been presented to the

Secretary of Agriculture

An application requesting a certificate of protection for an alleged distinct variety of sexually reproduced, or tuber propagated plant, the name and description of which are contained in the application and exhibits, a copy of which is hereunto annexed and made a part hereof, and the various requirements of LAW in such cases made and provided have been complied with, and the title thereto is, from the records of the PLANT VARIETY PROTECTION OFFICE, in the applicant(s) indicated in the said copy, and Whereas, upon due examination made, the said applicant(s) is (are) adjudged to be entitled to a certificate of plant variety protection under the LAW.

Now, therefore, this certificate of plant variety protection is to grant unto the said applicant(s) and the successors, heirs or assigns of the said applicant(s) for the term of TWENTY years from the date of this grant, subject to the payment of the required fees and periodic replenishment of viable basic seed of the variety in a public repository as provided by LAW, the right to exclude others from selling the variety, or offering it for sale, or reproducing it, or importing it, or exporting it, or conditioning it for propagation, or stocking it for any of the above purposes, or using it in producing a hybrid or different variety therefrom, to the extent provided by the PLANT VARIETY PROTECTION ACT. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

CORN, FIELD

'PHVP4'

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington, D.C. this thirtieth day of April, in the year two thousand and thirteen.

Attest:

Commissioner
Plant Variety Protection Office
Agricultural Marketing Service

Secretary of Agriculture

eur J. Vilsel

GENERAL INSTRUCTIONS: To be effectively filed with the Plant Variety Protection Office (PVPO), ALL of the following items must be received in the PVPO: (1) Completed application form signed by the owner; (2) completed exhibits A, B, C, E, F; (3) for a tuber reproduced variety, verification that a viable (in the sense that it will reproduce an entire plant) tissue culture will be deposited and maintained in an approved public repository; and (4) payment by credit card or check drawn on a U.S. bank for \$4,382 (\$518 filling fee and \$3,864 examination fee), payable to "Treasurer of the United States" (See Section 97.6 of the Regulations and Rules of Practice). NEW: With the application for a seed reproduced variety or by direct deposit soon after filling, the applicant must provide at least 3,000 viable untreated seeds of the variety per se, and for a hybrid variety at least 3,000 untreated seeds of each line necessary to reproduce the variety. Partial applications will be held in the PVPO for not more than 90 days; then returned to the applicant as un-filed. Mail application and other requirements to Plant Variety Protection Office, AMS, USDA, Room 401, NAL Building, 10301 Baltimore Avenue, Beltsville, MD 20705-2351. Retain one copy for your files. All items on the face of the application are self explanatory unless noted below. Corrections on the application form and exhibits must be initialed and dated. DO NOT use masking materials to make corrections. If a certificate is allowed, you will be requested to send a payment by credit card or check payable to "Treasurer of the United States" in the amount of \$768 for issuance of the certificate. Certificates will be issued to owner, not licensee or agent.

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. The fees for filing a change of address; owner's representative; ownership or assignment; or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

Plant Variety Protection Office Telephone: (301) 504-5518

FAX: (301) 504-5291

General E-mail: PVPOmail@usda.gov

Homepage: http://www.ams.usda.gov/science/pvpo/PVPindex.htm

SPECIFIC INSTRUCTIONS:

To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority and provide evidence that the permanent name of the application variety (even if it is a parental, inbred line) has been cleared by the appropriate recognized authority before the Certificate of Protection is issued. For example, for agricultural and vegetable crops, contact: U.S. Department of Agriculture, Agricultural Marketing Service, Livestock and Seed Programs, Seed Regulatory and Testing Branch, 801 Summit Crossing Place, Suite C, Gastonia, North Carolina 28054-2193 Telephone: (704) 810-8870. http://www.ams.usda.gov/lsg/seed.htm.

ITEM

(1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; 19a, Give:

(2) the details of subsequent stages of selection and multiplication;

evidence of uniformity and stability; and

- (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:

identify these varieties and state all differences objectively;

- (2) attach replicated statistical data for characters expressed numerically and demonstrate that these are clear differences; and
- (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.

19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the

- If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
- 23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
- 24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.
- 22. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

23. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.) Transferred for experimental use in United States in 2009.

24. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

USPTO 6/9/2009 Application No. 12/480,705 Patent No. 7,994,405.

According to the Peperwork Reduction Act of 1995, an agency may not conduct or spansar, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. The time required to complete this information collection is estimated to average 1.4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, periorial status, spaint status, spaint status, spaint status, spaint status, spaint status, spaint information, political balials, reprisal, or bacause all or part of an individual's income is derived from any public assistance program (Not all prohibitible) bases apply to all programs.) Parsons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, atc.) should contect USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complete of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avanue, S.W., Washington, D.C. 20250-9410, or cell (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Pioneer line PHVP4, Zea mays L., a yellow corn inbred, was developed by Pioneer Hi-Bred International, Inc. from the single cross hybrid PHC8H X PHCND (PVP Certificate No. 200500230) using the pedigree selection method of plant breeding. Varieties PHC8H and PHCND are proprietary inbred lines of Pioneer Hi-Bred International, Inc. Variety PHC8H was derived from PH24E (PVP Certificate No. 9600204) and PH1BC (PVP Certificate No. 200000242). Selfing was practiced from above hybrid for 8 generations using pedigree selection. During line development, crosses were made to inbred testers for the purpose of estimating the line's combining ability. Yield trials were grown at York, NE, USA as well as other Pioneer research locations. After initial testing, additional hybrid combinations have been evaluated and subsequent generations of the line have been grown and hand-pollinated with observations again made for uniformity.

Variety PHVP4 has shown uniformity and stability for all traits as described in Exhibit C – "Objective Description of Variety." It has been self-pollinated and ear rowed for 6 generations with careful attention paid to selection criteria and uniformity of plant type to assure genetically homozygous and phenotypic stability. The line has been increased both by hand and in isolated fields with continued observations for uniformity and stability, and for 4 generations during the final stages of inbred development and seed multiplication. Very high standards for genetic purity have been established morphologically using field observations and using sound laboratory methodologies.

No variant traits have been observed or are expected in PHVP4.

The criteria used in the selection of PHVP4 were yield, both per se and in hybrid combinations. Late season plant health, grain quality, and stalk lodging resistance, were important criteria considered during selection. Other selection criteria include: ability to germinate in adverse conditions, disease and insect resistance, pollen yield and tassel size.

Exhibit A: Developmental History for PHVP4

Pedigree	Year Grown	Inbreeding Level of Pedigree Grown
PHC8H/PHCND	2002	F1
PHC8H/PHCND)X	2003	F2
PHC8H/PHCND)X4	2003	F3
PHC8H/PHCND)X42	2004	F4
PHC8H/PHCND)X421	2004	F5
PHC8H/PHCND)X4211	2005	F6
PHC8H/PHCND)X42113	2006	F7
PHC8H/PHCND)X421133	2007	F8
PHC8H/PHCND)X421133X		F9 (Seed)

PHVP4 was selfed and ear-rowed from F3 through F8 generation. Uniformity and stability were established from F6 through F8 generation and beyond when seed supplies were increased.

Exhibit B: Novelty Statement

Variety PHVP4 mostly resembles Pioneer Hi-Bred International, Inc. proprietary inbred line PHCND (PVP Certificate No. 200500230). Table 1 shows two sample t-tests on data collected primarily in Johnston and Dallas Center, Iowa in 2008. The traits collectively show measurable differences between the two varieties.

Variety PHVP4 has a wider cob diameter (27.2 mm vs. 24.4 mm) than variety PHCND (Table 1).

Variety PHVP4 has a shorter ear length (12.0 cm vs. 15.5 cm) than variety PHCND (Table 1).

Variety PHVP4 has a longer husk extension length (11.9 cm vs. 5.6 cm) than variety PHCND (Table 1).

Exhibit B: Novelty Statement Table

PHVP4_PHCND

Table 1: Data from Johnston and Dallas Center, Iowa in 2008 presented by trait, across environments, and broken out by environment. Data are supporting evidence for differences between PHVP4 and PHCND. Varieties were grown in two locations that had different environmental conditions. Environments had different planting dates and were in different fields. A two-sample t-test was used to compare differences between means.

COMMENTS (e. g. state how heat units were calculated, standard inbred seed source, and/or where data was collected. Continue in Exhibit D).

*Sample number reflects the number of plots where the trait(s) was observed and not the number of individual plants scored. Please see 'CLARIFICATION OF DATA IN EXHIBITS B AND C' for details of how plots were set up.

Stringfield, G.H. Maize Inbred Lines of Ohio A.E.S., Bul. 831. 1959.

U.S. Department of Agriculture 1936, 1937. Yearbook.

**For these plot-level traits, kernels from approximately 5 representative ears were sampled. 100 unsized kernels were counted and weighed. Up to 500 grams of kernels were sized by a 13/64 inch slot screen.

Insect, disease, brittle snapping, yield and root lodging data are collected mainly from environment where variability for the trait can be obtained within the experiment.

CLARIFICATION OF DATA IN EXHIBITS B AND C

Please note the data presented in Exhibit B and C, "Objective Description of Variety," are collected primarily at Johnston and/or Dallas Center, Iowa. The data in Table 1 are from two sample t-tests using data collected in Johnston and Dallas Center, IA. These traits in Exhibit B collectively show distinct differences between the two varieties.

For any given year of data collection, our experimental design was set up in a typical complete block design commonly used in agricultural corn research experiments with one replication grown at each location. The experiment procedures generally involve two locations/environments with different planting dates, planted in 17.42 ft. rows with 2 rows for each variety. Approximately 24-30 plants emerged in each of 2 rows for a total of around 48 to 60 plants being evaluated at each location and 96 to 180 plants across locations. For plant level traits, we sampled up to 15 representative plants from the 2 rows of the 2 row plot (group) of plants at each location. For plot level traits we evaluated the 2 row plot (group) and gave a representative score or average on the 48-60 plants in the group within an experiment.

	GROWING DEGRE	E UNITS (GDUs)	PRECIPITATION (Inches)				
	2008		2008				
Month	Dallas Center	Johnston	Dallas Center	Johnston			
May	351	380	3.36	4.54			
June	606	641	8.15	13.43			
July	716	771	8.26	8.14			
August	600	682	1.67	1.24			
September	415	469	3.12	5.57			
TOTAL	2688	2943	24.56	32.92			

Growing Degree Units use following formula: GDU = ((T1+T2)/2)-50

Where T1 = minimum temperature for a given day with 50 degrees Fahrenheit as the minimum temperature used and 86 degrees Fahrenheit is the maximum temperature used.

Where T2 = maximum temperature for a given day with 86 degrees Fahrenheit as the maximum temperature used and 50 degrees Fahrenheit is the minimum temperature used.

GDUs are calculated each day and accumulated (summed) over certain number of days.
